Does it rain more frequently in London these years?

# Results for Q1- Overall Trend

# Results for Q1- Overall Trend

# Motivation Questions

When is a good time to visit London?

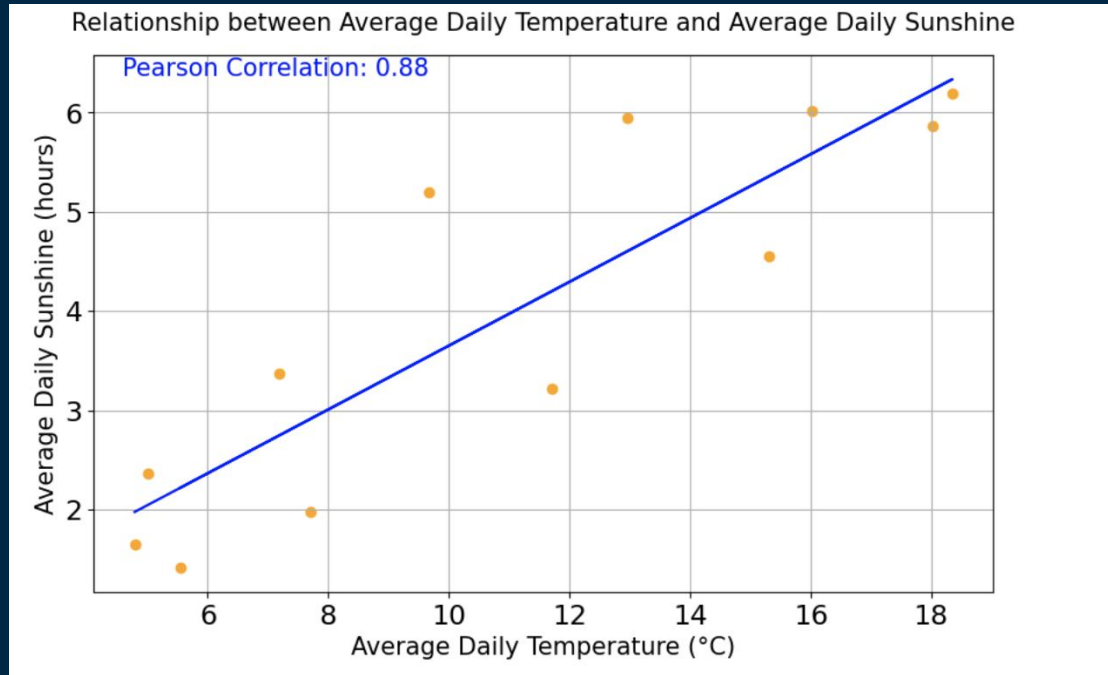

# Results for Q2- Monthly Differences

# Results for Q2- Relationship

PearsonRResult(statistic=0.8788019645498905, pvalue=0.00016746416363140452)

# Results for Q2- Relationship

PearsonRResult(statistic=-0.15845045739932134, pvalue=0.6228251707001026)

# Takeaway

## 1. Overall Trend of Sunshine & Precipitation

- a. Over this 42-year period, both sunshine and precipitation exhibited variability, yet **neither** displayed **significant upward** or **downward trends**.

## 2. Visit Time

- a. **July** is a good time with **more sunshine** and **fewer rains**.
  - i. **July** has **the most sunshine** (6.19 hours).
  - ii. The temperature is strongly positively correlated with sunshine duration.
  - iii. On a daily average basis, **October** experiences **the highest rainfall** (2 mm), while **March** has the **least** (1.21 mm). July has a precipitation around 1.25mm.

The background is a dark navy blue. It is decorated with various geometric elements: thin white vertical lines of varying lengths, small squares in solid teal, solid pink, and solid orange, as well as squares with thin orange outlines. These elements are scattered across the frame, creating a modern, minimalist aesthetic.
